

VISIBLE BODY®

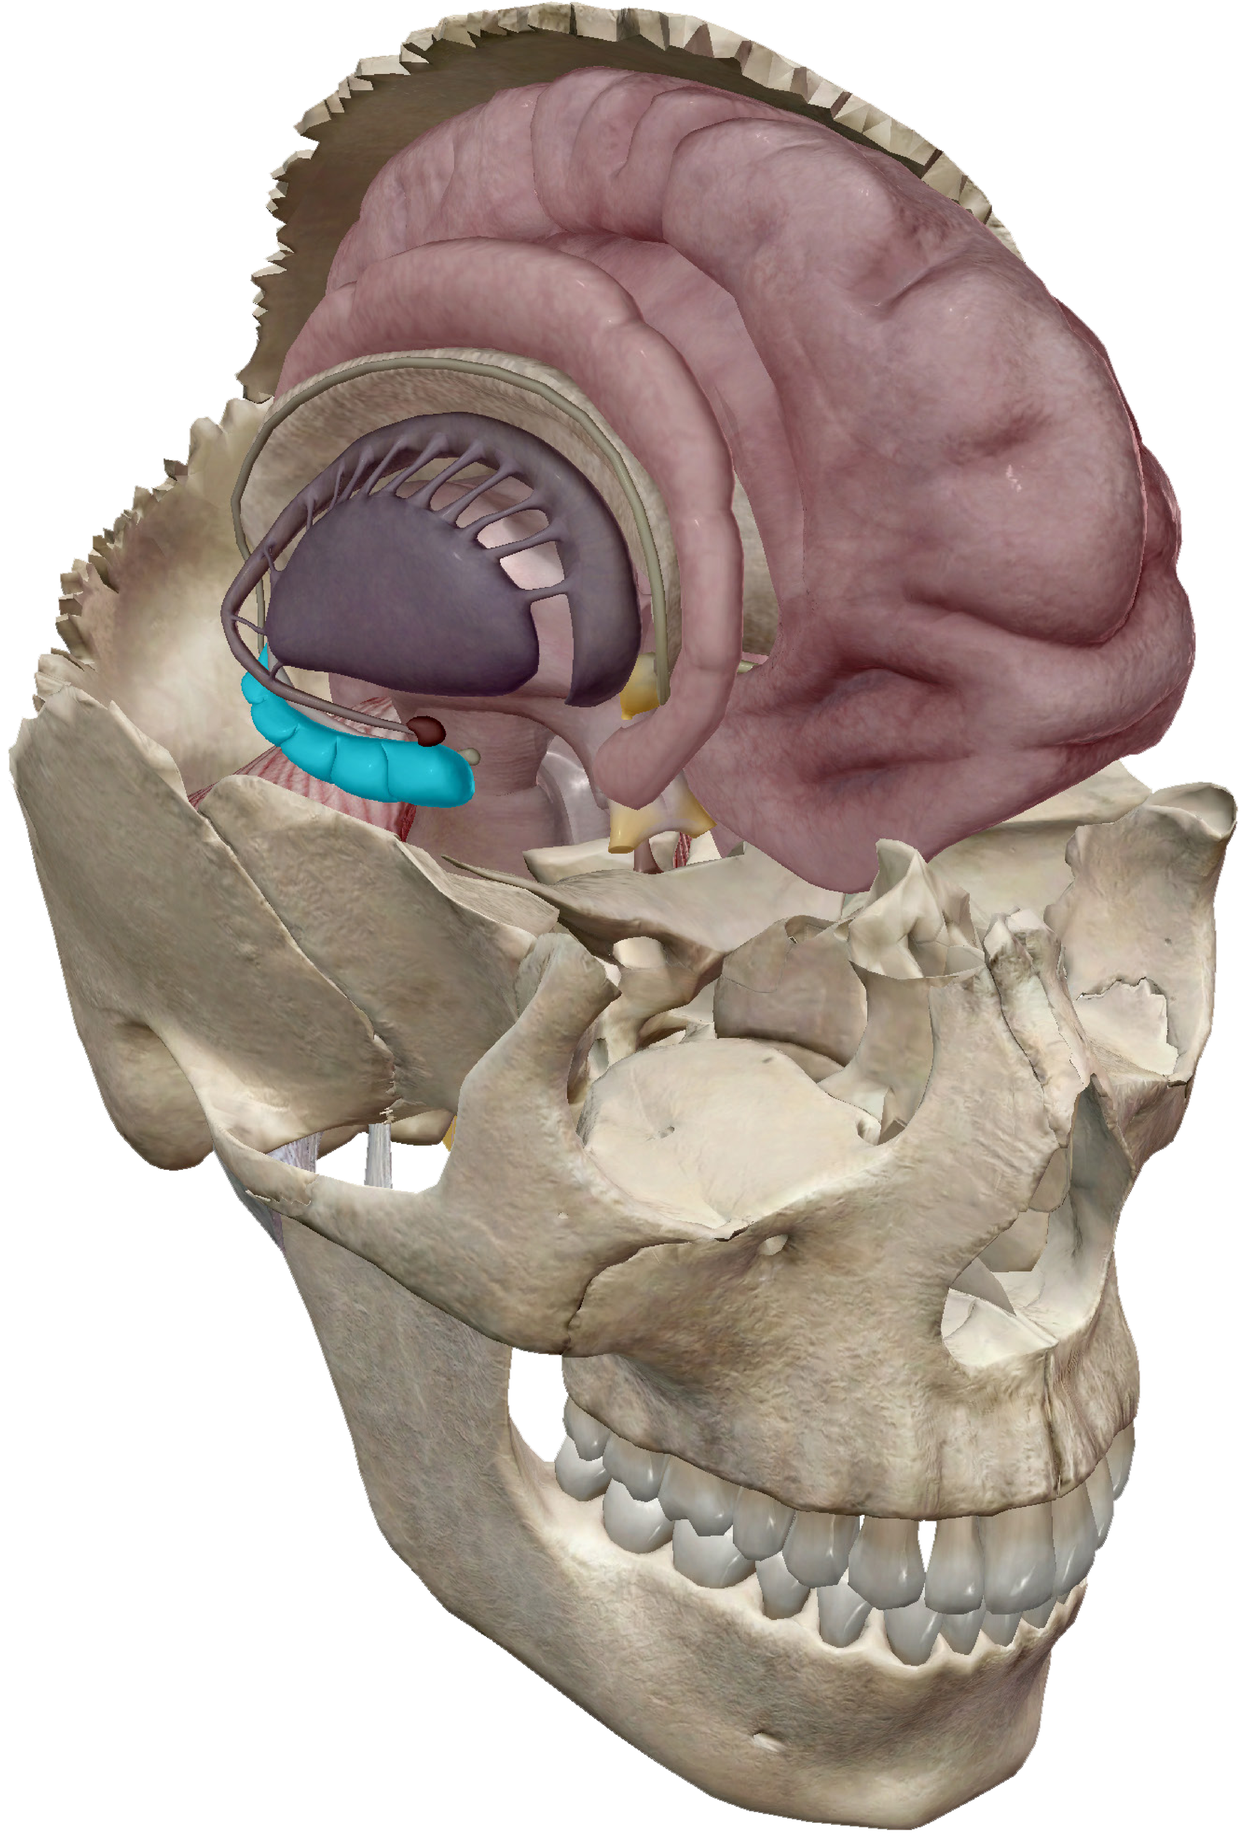

Fact and Fiction

A book full of cool facts and debunked myths and awesome pictures!

Did you know?

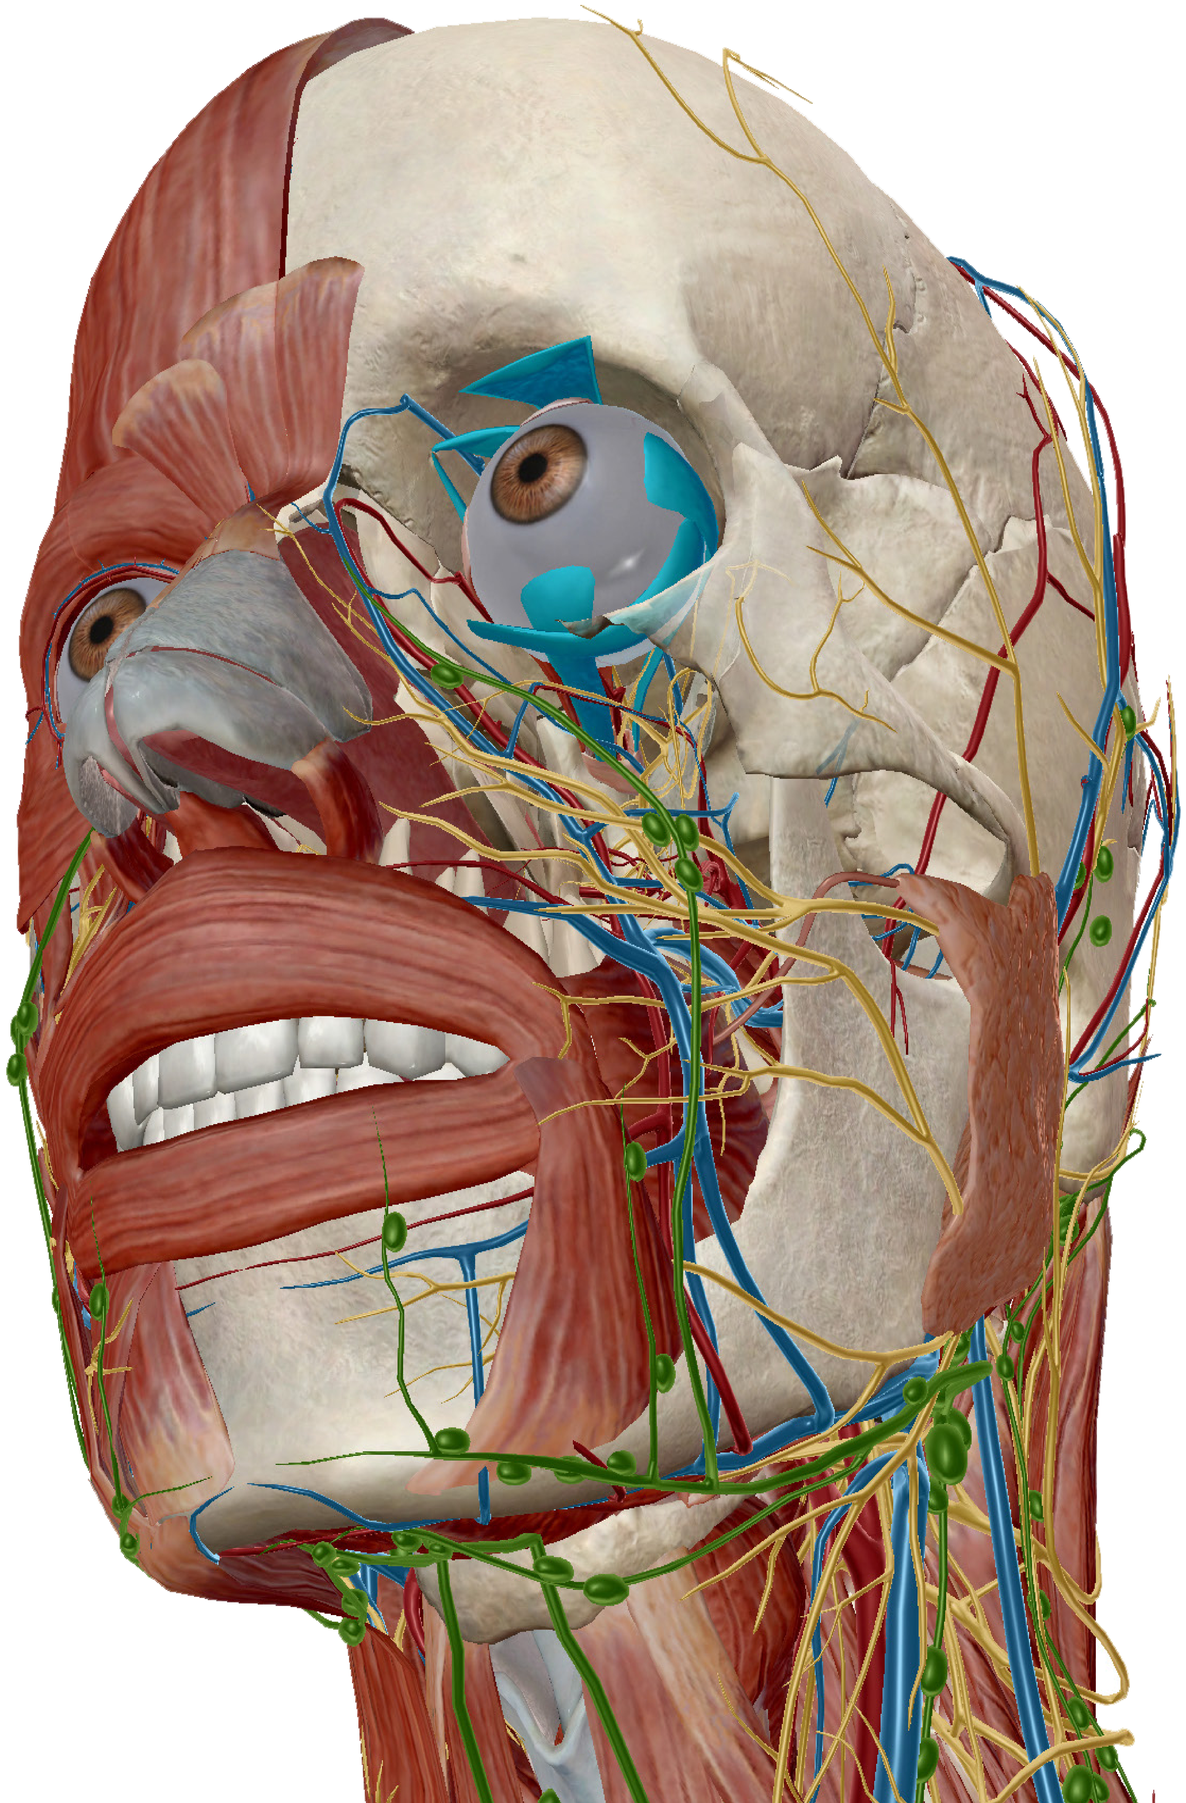

The brain's memory storage capacity is 2.5 petabytes.

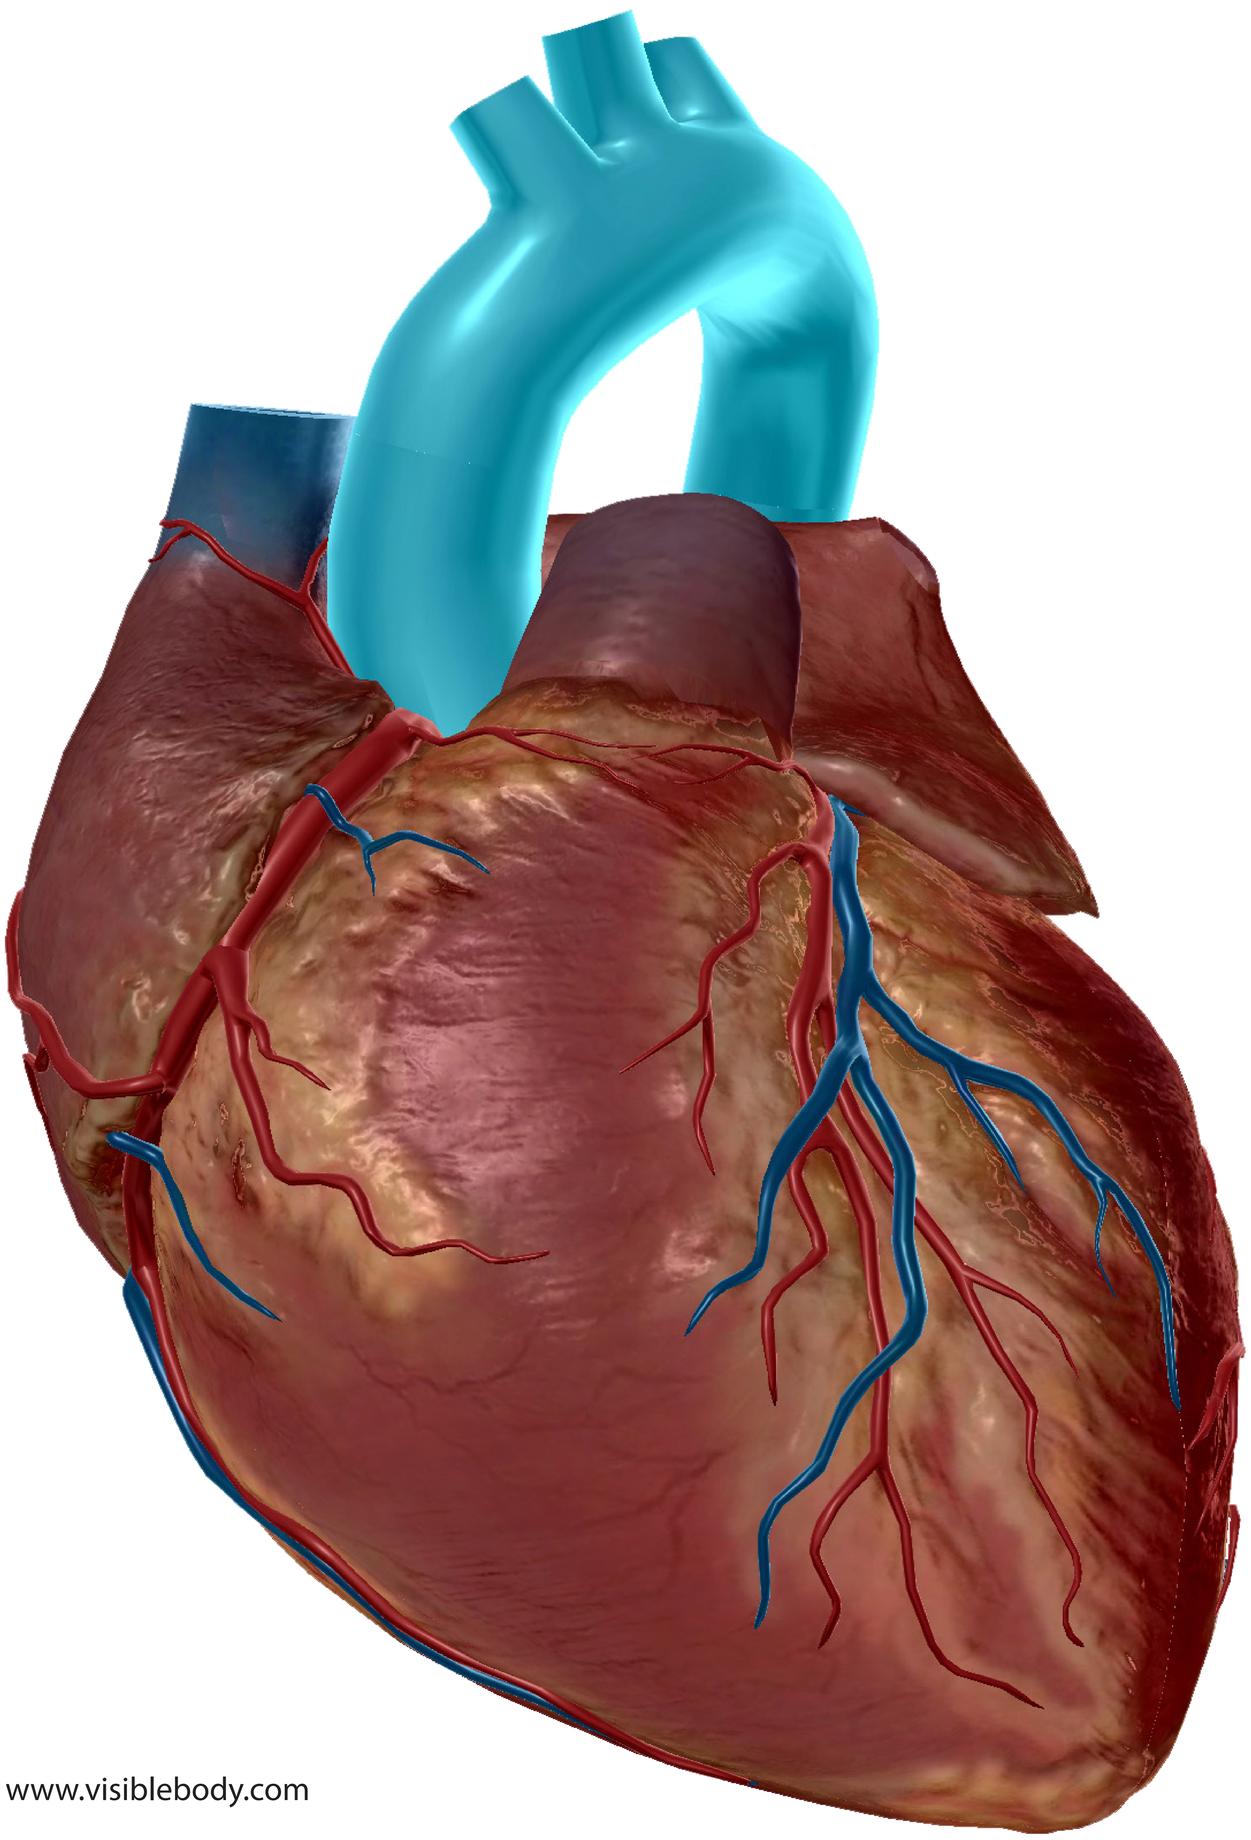

That's the equivalent of 3 million hours, or 300 years, of video.

The extraocular muscles move over 100,000 times a day.

They’re the busiest skeletal muscles in your body!

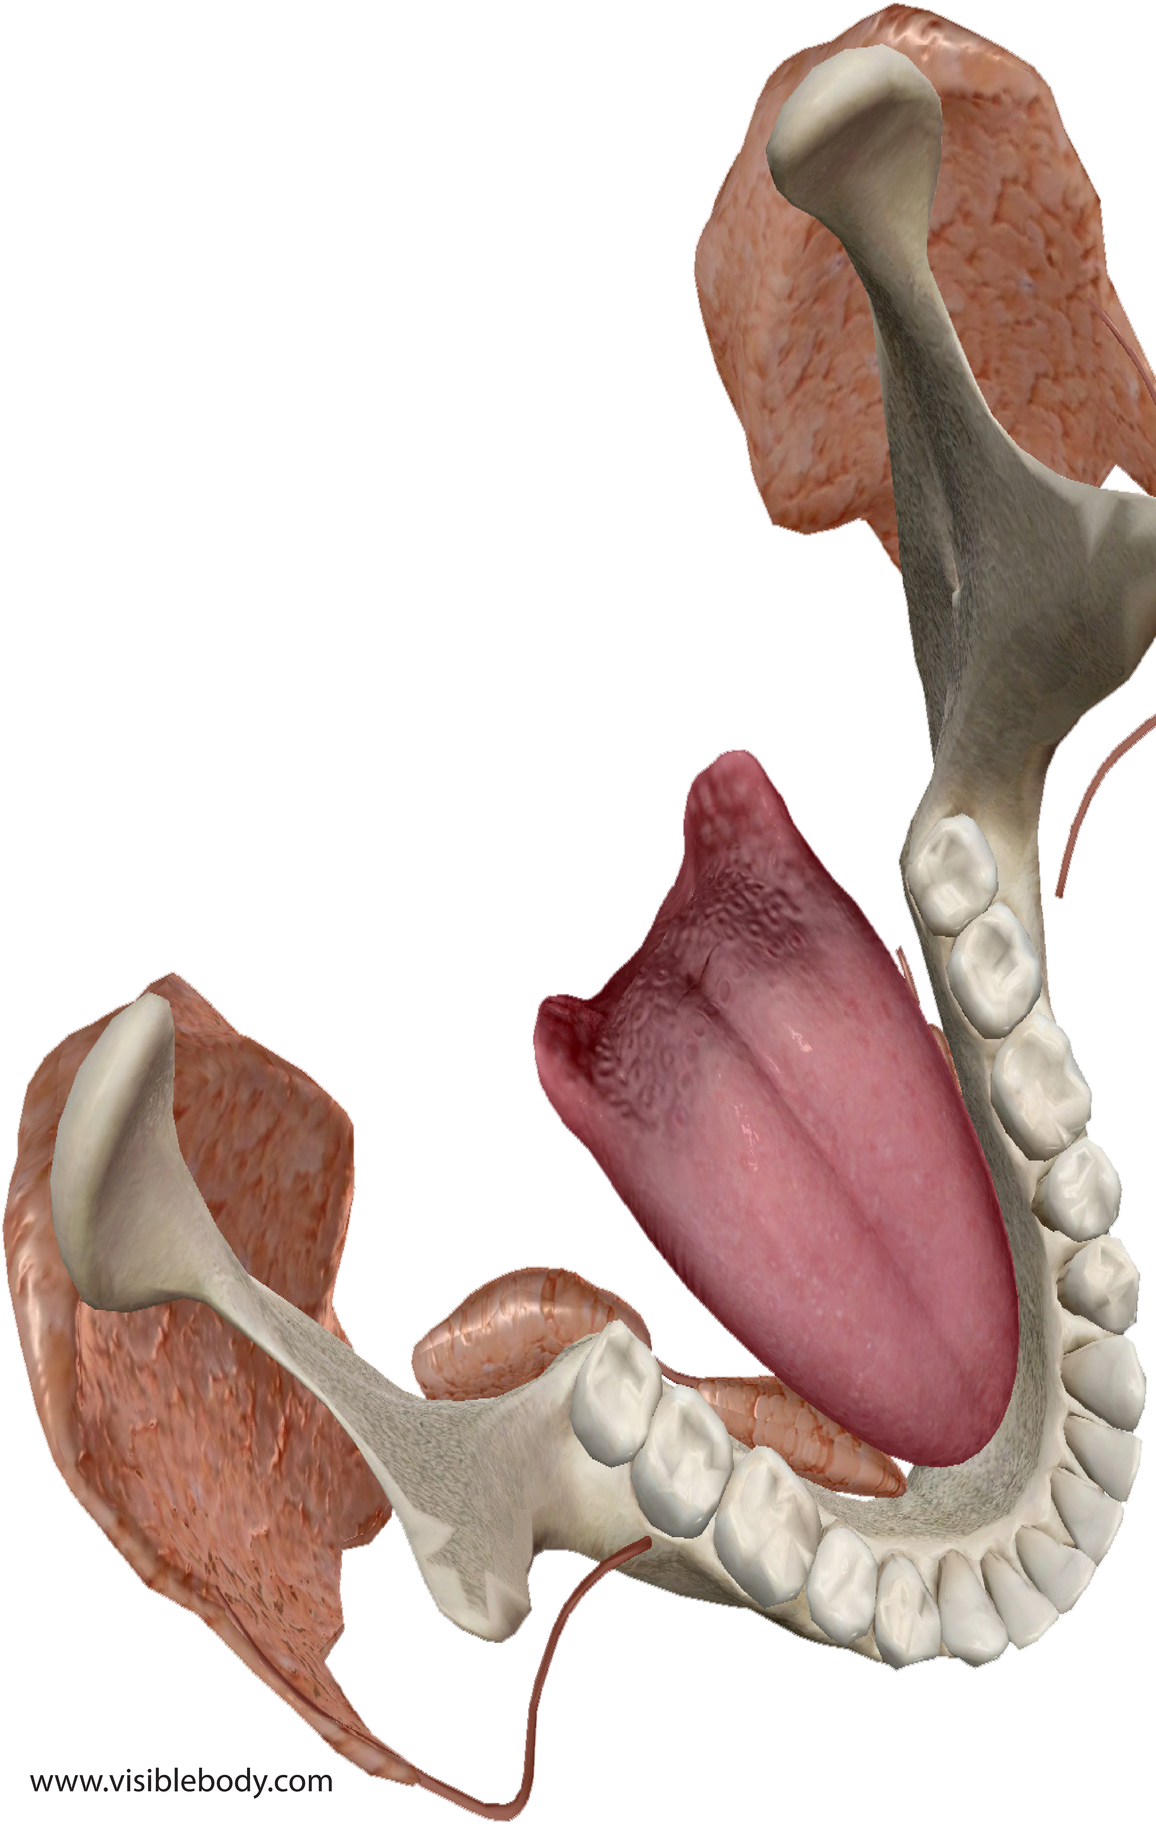

The aorta is about 1.2 in (2-3 cm) in diameter.

That’s thicker than the width of an average garden hose!

The "pop" sound made by cracking joints is caused by a gas-filled cavity that forms in synovial fluid.

Synovial fluid lubricates the joints, and when a joint is separated (like when you crack your knuckles), there is no more fluid to fill the increased joint volume, so a cavity is created and that is the "pop" sound.

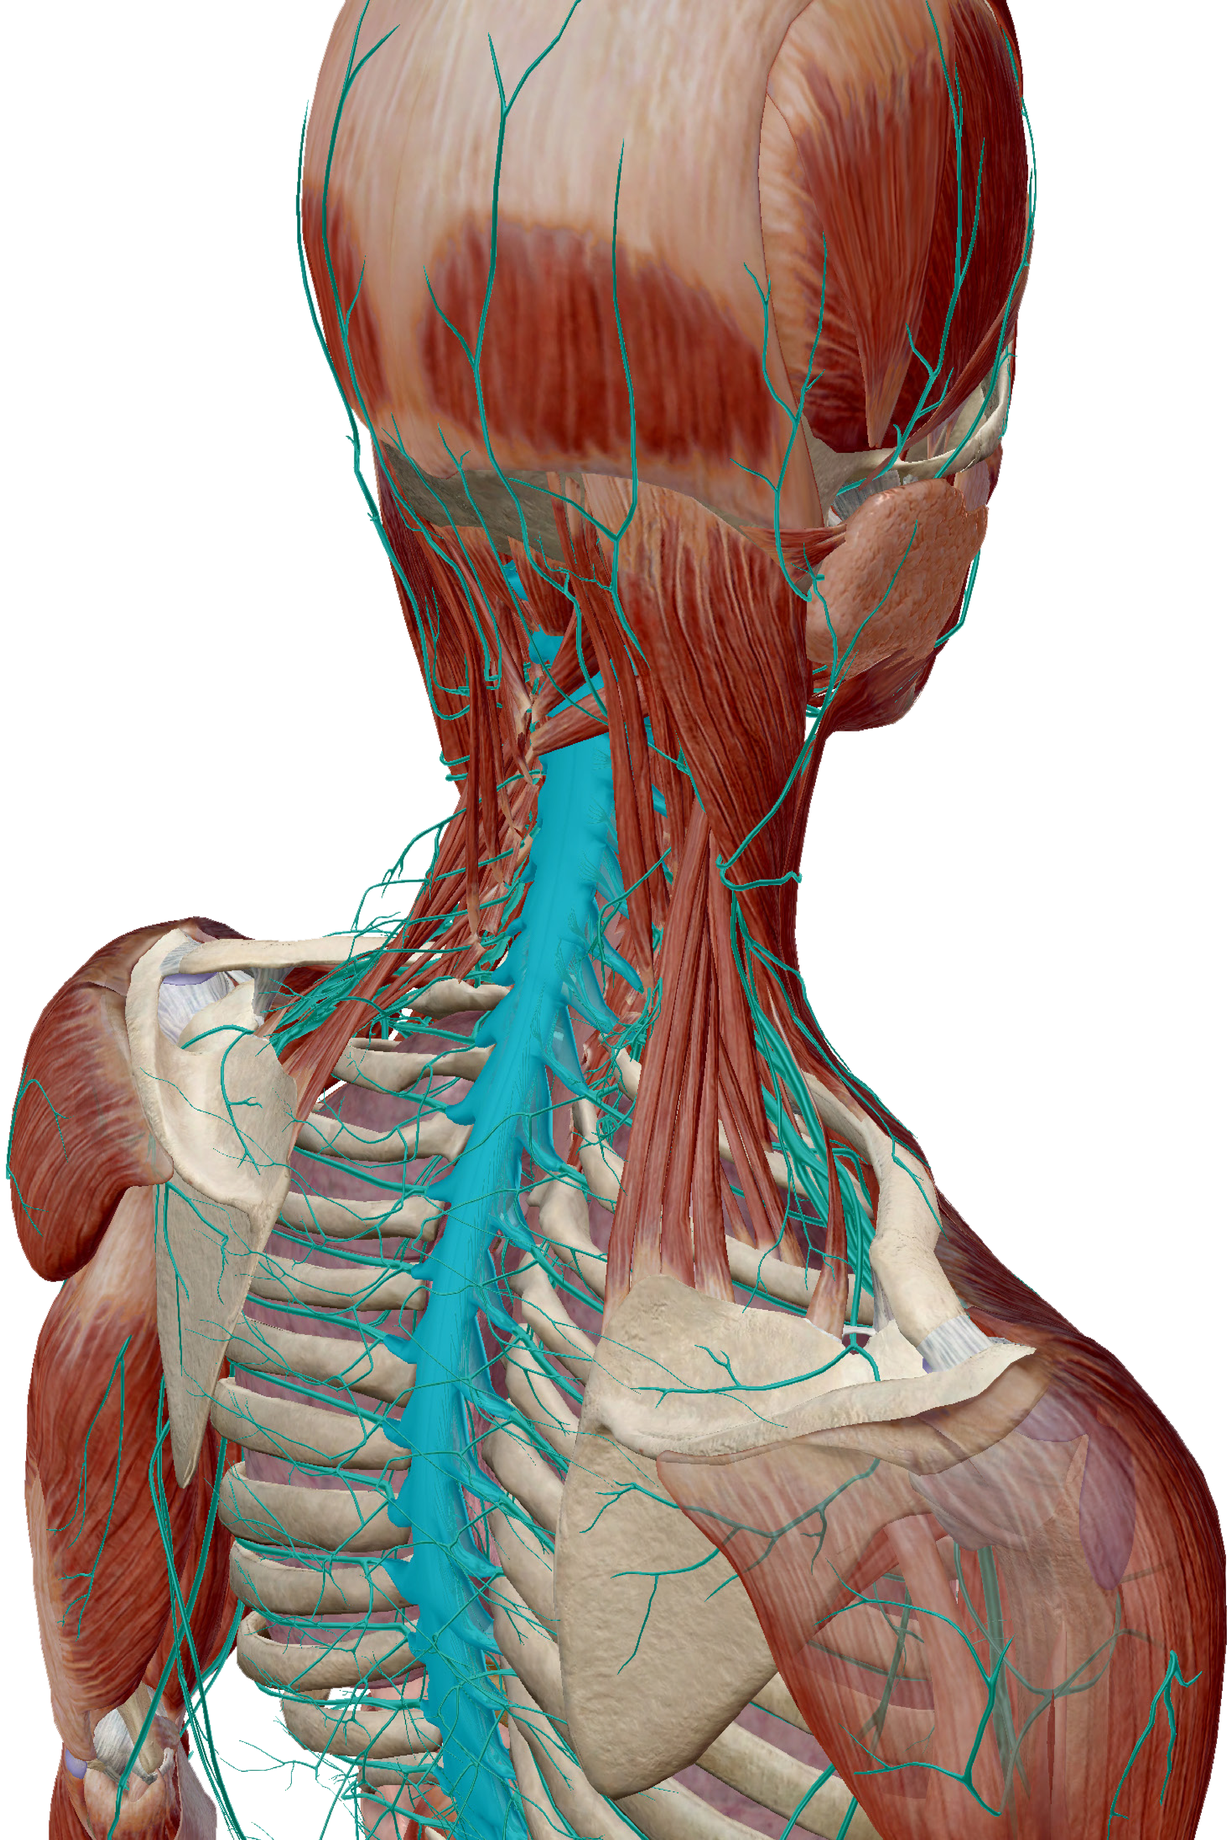

Salivary glands produce 0.4 gal (1.5 L) of saliva every day.

In a lifetime, a human can produce enough to fill almost three swimming pools!

www.visiblebody.com

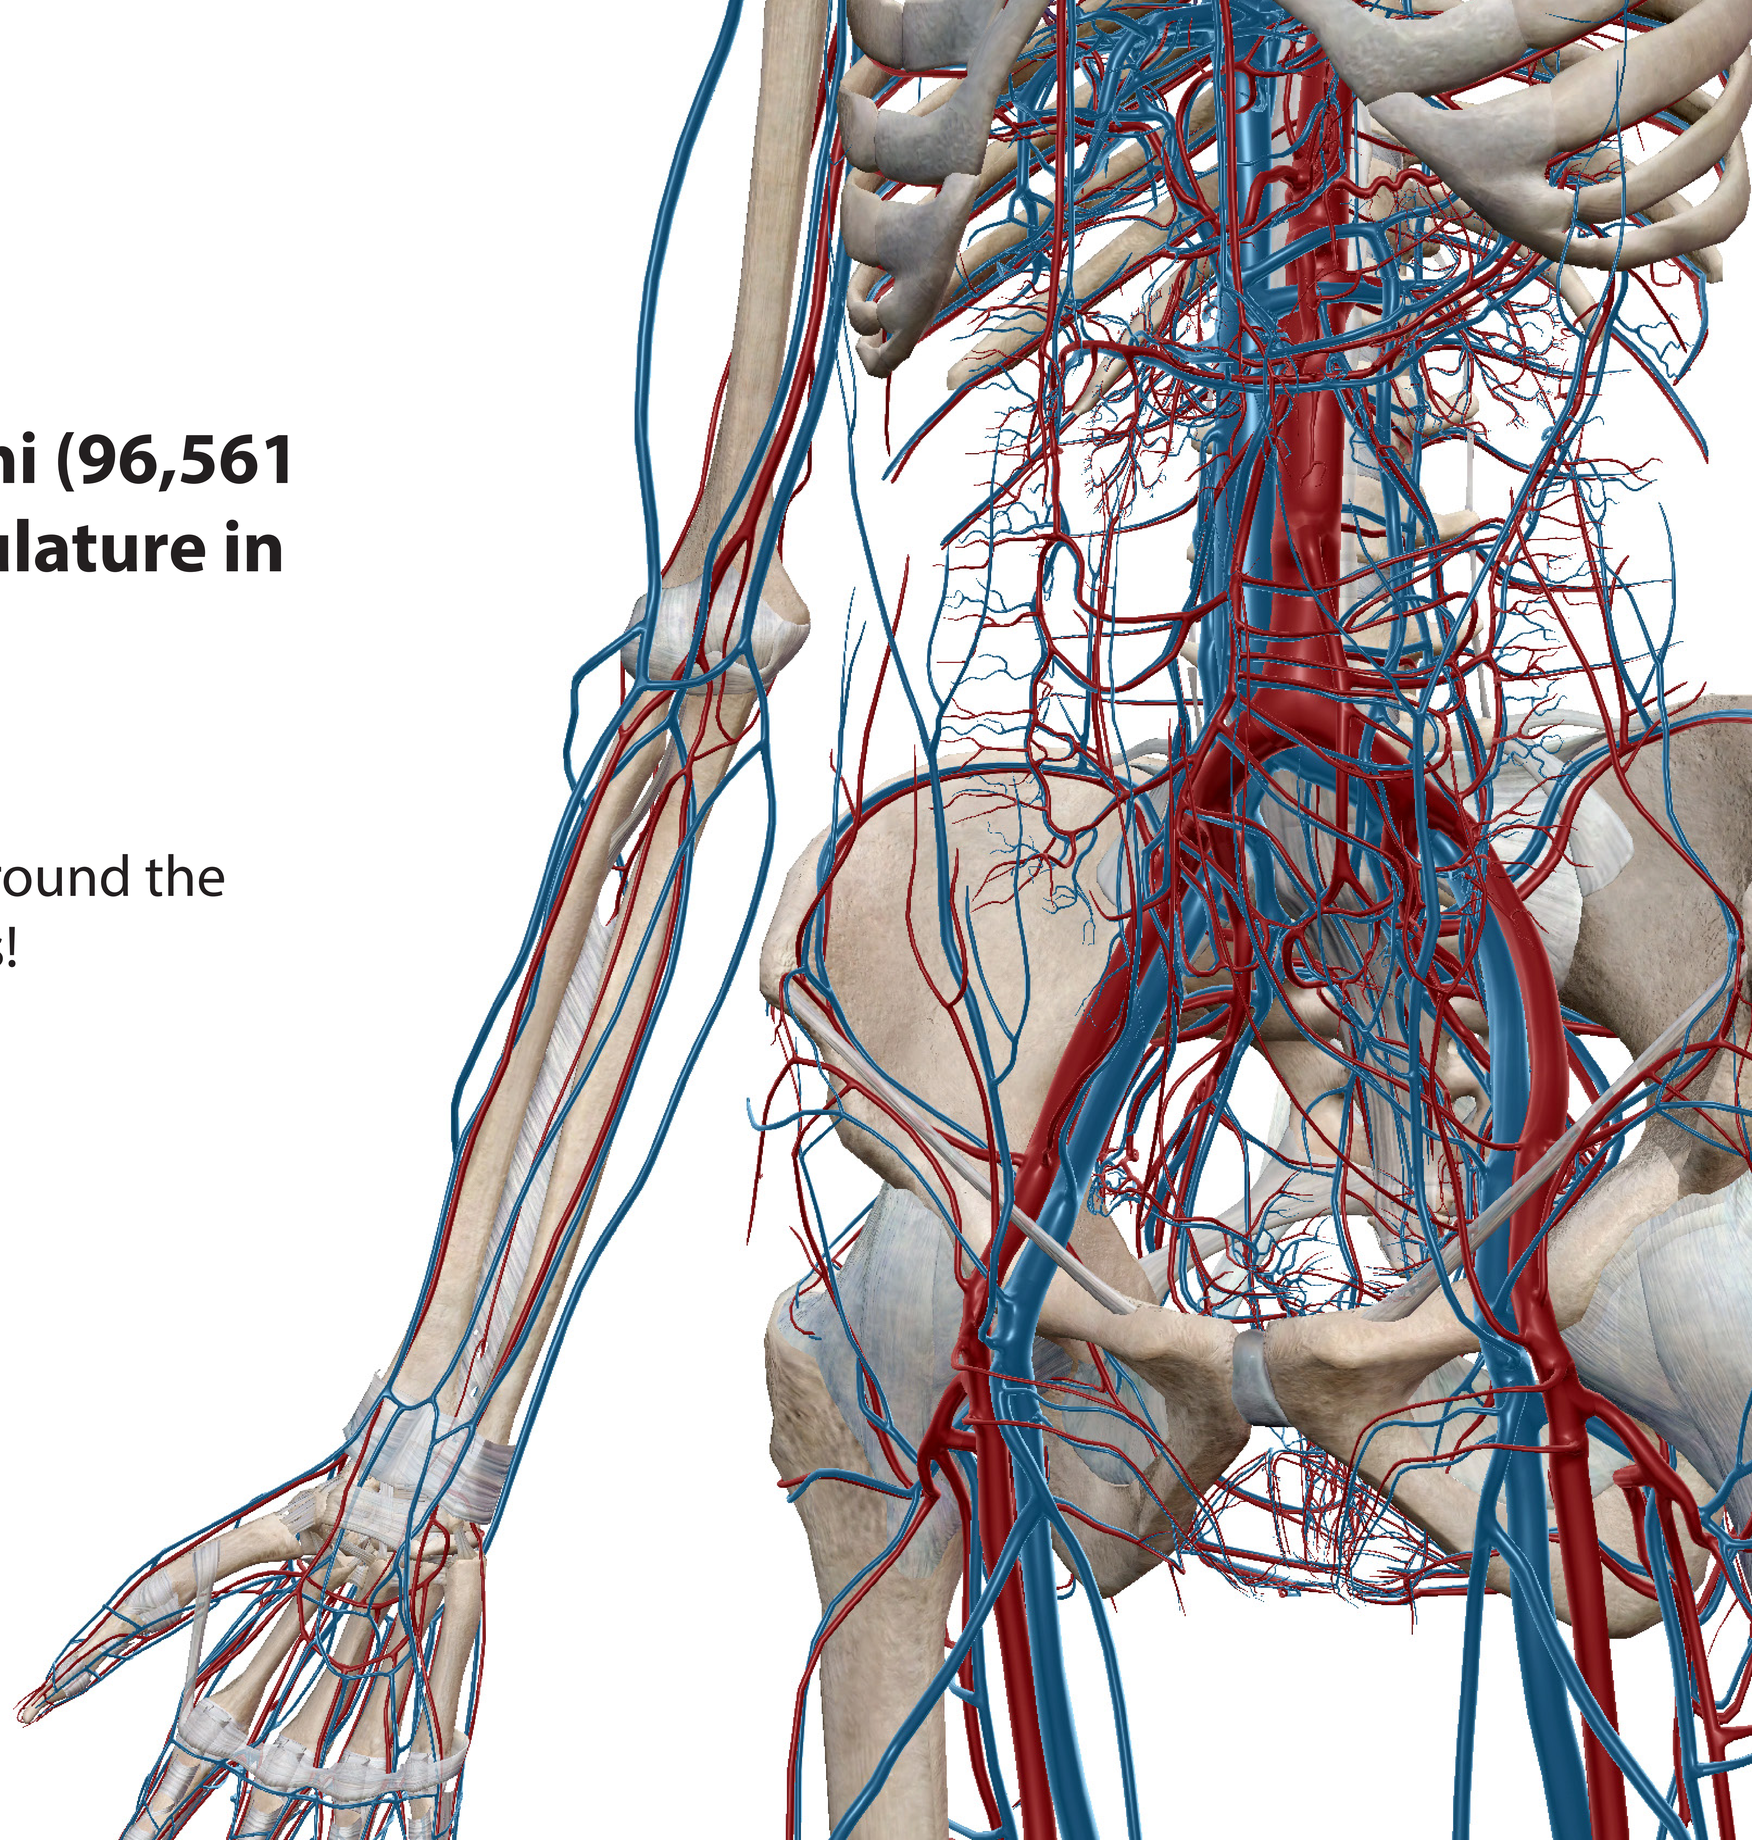

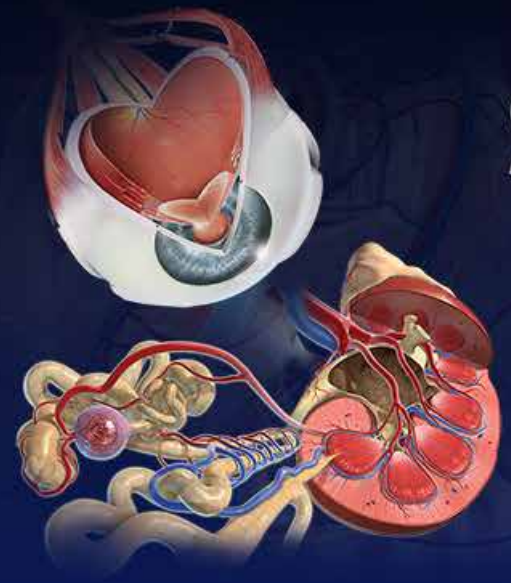

Electrical signals can travel throughout your nervous system as fast as 268 mph (431 kmh).

That’s faster than most street-legal car in the world!

There are 60,000 mi (96,561 km) of blood vasculature in your body.

That’s enough to wrap around the world almost three times!
